

DML500 High Output Distributed Mode Loudspeaker

Features:

- High output distributed mode loudspeaker
- Large format carbon fiber acoustic panel
- Four high power exciter motor structures
- Operates on bending wave physics principles providing excellent diffuse acoustic performance and high intelligibility in challenging architectural environments
- Highly durable aluminum frame structure with multiple attachement points for ultimate flexibility and strength
- Integrated multi use hardware with VESA mounting pattern

Applications:

- Houses of Worship
- Performaing Arts Centers
- Sports Facilities
- **Airports**
- Retail Spaces
- Educational and Conferencing Facilities
- Portable Audio Systems

The DML500 is a versatile sound reinforcement loudspeaker system housed in a unique, slim line aluminum enclosure.

The DML500 delivers highly intelligible and immersive audio performance in even the most challenging architectural environments. Bending wave technology provides diffuse loudspeaker behavior that generates 165° of wide band dispersion coverage and excellent results in the reverberant audio field.

The main acoustical element is constructed of a multilayer honeycomb carbon fiber panel. The panel is driven by four high power, neodymium motor structures with 32mm voice coils.

The resulting DML panel uses bending wave modal physics to radiate audio over almost eight octaves in a very wide audio band and with a very diffuse manner. These charateristics provide unparalled audio performance when experienced in the reverbant audio field.

Additionally, the DML500 exhibits superb power response, which is the sum of the total radiated acoustic output of a loudspeaker as measured in a sphere around the speaker at incremental intervals on- and off-axis in the far (reverberant) field.

Excellent off-axis performance results in a loudspeaker that delivers excellent 165° coverage.

Rugged physical construction features a powder coated die cast aluminum enclosure with multiple Tectonic Audio Labs continually engages in research related to product improvemounting points with a flexible mounting bracket ment. Specifications subject to change without notification with standard VESA attachment points.

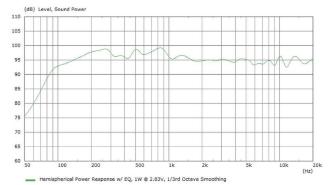

Specifications:

System		
Frequency Range (-10dB)	75Hz-20kHz	
Frequency Response (+/-6dB):	85Hz-20kHz	
Horizontal/Vertical Coverage:	165 degrees	
System Sensitivity:	91dB	
Rated Maximum SPL:	120dB	
System Nominal Impedance:	8 Ohms	
Power Handling		
(Continuous/program/Peak)	(200W/300W/400W)	
Recommended High Pass Filter:	100Hz (Butterworth, 2nd Order)	
Drivers		
Flat Panel Transducer:	4 x DML Exciter	
Voice Coil Diameter:	32mm	
Voice Coil Winding Wire Material:	Copper Clad Aluminum	
Suspension Design:	Standard spider	
Diaphragm Design:		
Design Principle :	Bending Wave Modal	
Radiator Surface Area:	378 x 478mm	
Material:	Carbon Fiber Honeycomb	
Input Connectors:	Neutrik Speakon NL4	
	(+1/-1 Input) (+2/-2 Loop out)	
Physical		
Outer Dimensions (W x H x D):	800 x 550 x 90mm	
	(35.5 x 21.6 x 3.5in)	
Suspension Attachment		
Outer Frame:	4 x M8 (385 x 486mm)	
	(15.15 x 19.13in)	
Rear Grille :	4 x M8 (232 x 202mm)	
	(9.13 x 7.95in)	
Weight:	20.0kg (44lbs)	
Shipping Dimensions:	940 x 686 x 203mm	
	(37 x 27 x 8in)	
Shipping Weight:	23.2 Kg (51lbs)

DML500 High Output Distributed Mode Loudspeaker

Hemispherical Power Response

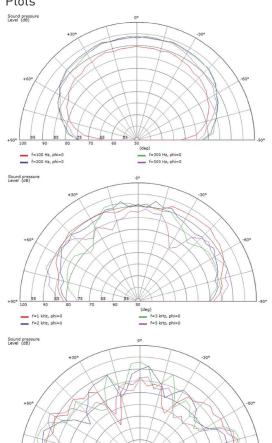

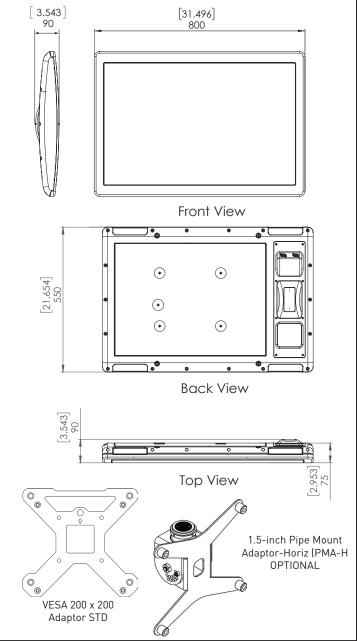

Due to the modal nature of DML loudspeakers, the best way to represent their acoustic charateristics is to measure their power response. Measurments are made at 5° intervals in both the vertical and horizontal axis and averaging a total of 1349 measurments. Please refer to our "Sound Power Response" application notes for further information.

Hemispherical Contour Plot

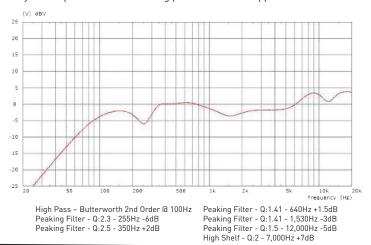

Polar Plots

Recommended Filtering/Crossover: The following are the initial recommended acoustic filters as implemented in all DML acoustic measurements. They also represent an EQ starting point for all field applications.
