The **D4LP** is a specialty loudspeaker built shallower than competing products, thus enabling its use in confined spaces, while still providing the full range of features common to all members of the D SERIES. Only 3.4 inches in depth, the D4LP solves space problems that competing products cannot. Suitable for paging, background music, and to augment larger models, the D4LP is a solid performer. Characteristics are similar to the D4 with only a minor amount of bass reduction. It installs quickly and provides exceptionally uniform coverage with excellent sonic properties. Uniform voicing among the D SERIES product family makes it easy to match the D4LP to larger models in the series. Featuring genuine coaxial design with separate magnets for the LF and HF drivers, the D4LP exhibits reduced distortion and industry-leading sensitivity permitting 3 dB to 6 dB greater output level, while requiring half the amplification power of competing products.

The proprietary **Tru-Phase™** waveguide and perfectly centered driver produce a consistently wide conical polar response up to 16 kHz. Community's patented **Carbon Ring Cone Technology™** increases the effective cone area to further reduce distortion while reinforcing the cone for improved durability.

ARCHITECTURAL SPECIFICATIONS

The loudspeaker system shall be a two-way, full-range ceiling mount system with a 4.5-inch low frequency transducer with patented Carbon Ring Cone Technology™ and a coaxially mounted ¾-inch exit high frequency compression driver. The drivers shall be connected to an integral crossover with a crossover frequency of 2 kHz, with a self-resetting solid state circuit breaker for driver protection. The paintable loudspeaker baffle shall be constructed of UL 94V-0 rated ABS material and include Twist-Assist™ face retainer tabs for easy insertion into the back cans. A paintable steel grille with a durable white powder coat finish shall be included.

The back can provided with the ceiling loudspeaker system, shall be constructed of corrosion-resistant zinc plated steel featuring spring loaded Drop-Stop™ installation assistant tabs. The back can shall include a recessed termination box with a removable locking connector with screw terminals for secure wire termination with "loop through" ability. Strain relief will be provided by a clamping mechanism for use with plenum rated cable or conduit.

The system shall have an amplitude response of 120 Hz to 16 kHz (+/- 5dB) and a low impedance (8 ohm) input capability of 22V RMS. The sensitivity at 1W/1m shall be 92 dB (160 Hz to 12.5 kHz, 1/3 octave bands). The loudspeaker system shall have a conical coverage pattern of 140 degrees from 500 Hz to 6 kHz. The nominal system impedance shall be 8 ohms (in low impedance setting).

The system shall be equipped with a 30W high performance autoformer for use in 70.7V or 100V distributed audio systems, with 30W, 15W, 7.5W and 3.75W taps available in 70.7V distributed systems (30W, 15W and 7.5W taps available in 100V distributed systems). An easily accessible front-face tap selector switch located on the front baffle, which is concealed by the supplied removable grille, shall be available for selecting autoformer and low impedance settings.
